

Ring Sizer

- 1) Print this page. Printing on heavy paper such as card stock or photo paper will give better results.

NOTE: For this to work correctly, you *must* be certain that the “Page Scaling” is set to “None” in the print dialog box.

- 2) Cut out this strip on the dotted line:

- 3) Starting with the end marked “start”, wrap the paper strip tightly around your knuckle on the appropriate finger, it needs to be wrapped firmly to give good results. We are trying to determine the measurement around the widest part of your finger.
- 4) Use a pen or pencil to mark the point on the paper where the outside end of the paper strip overlaps (forming a complete circle).
- 5) Using the guide below, carefully measure the length from your starting point to the mark where the paper overlapped. Measure to the nearest ring size, rounding up if necessary. Be certain to measure the part of the paper that was wrapped around your finger -- don't start measuring from the wrong end!

Tips for Success

- ⊕ Don't try to skip a step by cutting out the bottom size guide to wrap that around your finger. It will be too wide.
- ⊕ Your hands are probably not the same size - your dominant hand will tend to be larger. This means that if you happen to know the size of your wedding band (or any ring), you may not wear a ring that same size on your other hand.
- ⊕ The wider the band, the larger (in diameter) the ring needs to be. Most of my rings are 1/4" or more wide. You may need to order a ring 1/2 to 1 size larger to accommodate the wider ring band.
- ⊕ A ring that is slightly large is always preferable to one that is too small. Keep in mind that your fingers may swell a little bit during the course of the day or in hot weather.
